

JomBoss Current Truth

1. Purpose

This document is the current source of truth for JomBoss Joss Sdn. Bhd.

Codex must treat this document as the highest-authority summary of the company unless a signed legal document or verified financial record directly contradicts it.

This document should be updated whenever there is a major change in:

1. Company identity
2. Founder or team roles
3. Business model
4. Service offering
5. Pricing logic
6. Product roadmap
7. Revenue metrics
8. Client traction
9. Legal or compliance assumptions
10. Fundraising or competition status

If other documents conflict with this file, Codex must flag the conflict.

2. Company Identity

Legal Name

JomBoss Joss Sdn. Bhd.

Brand Name

JomBoss

Company Type

Private company limited by shares, incorporated in Malaysia.

Jurisdiction

Malaysia.

Company Status

Active.

Current Stage

Revenue-generating early-stage startup.

JomBoss is currently operating as a managed digital services provider powered by university student talent, while building toward a more scalable platform-based model.

3. Current One-Sentence Description

JomBoss helps SMEs and growing brands access affordable, accountable creative and digital execution through trained university student teams managed under structured workflows, while helping students earn, build portfolios, and gain real work experience.

4. What JomBoss Is Today

JomBoss is currently:

1. A managed student-powered service company
2. A creative and digital execution partner for SMEs
3. A structured project delivery system using student talent
4. A company that handles client communication, scope control, quality control, and delivery accountability
5. A platform-in-development, not yet a fully self-serve marketplace
6. A student career and portfolio-building ecosystem in progress

Clients engage JomBoss as a company, not individual freelancers.

JomBoss is responsible for scope, timeline, quality control, client communication, and delivery management.

5. What JomBoss Is Not

JomBoss is not currently:

1. A pure freelance marketplace
2. A job board

3. A connect-and-disappear matching platform
4. A traditional marketing agency in long-term positioning
5. A fully automated SaaS platform yet
6. A platform where students directly manage clients without JomBoss oversight

JomBoss may use marketplace and platform features in the future, but the current operating model is managed execution.

6. Current Business Model

JomBoss currently generates revenue mainly through:

1. Project-based creative and digital services
2. Monthly or campaign-based service packages
3. Credit-based content and production packages
4. Social media marketing packages
5. Creative production support
6. Potential future platform fees
7. Potential future microlearning, upskilling, or AI-assisted career tools

The current business model is agency-first but platform-oriented.

The agency model is used to:

1. Generate cash flow
 2. Test client demand
 3. Build SOPs
 4. Train student teams
 5. Understand operational bottlenecks
 6. Create repeatable workflows for future platform automation
-

7. Current Service Categories

Type A: Social Media Marketing

Type A is for clients who need strategy, content direction, planning, and ongoing execution.

It includes:

1. Brand and business understanding
2. Target audience thinking
3. Content direction
4. Marketing strategy proposal

5. Monthly content calendar
6. Content production
7. Posting support where applicable
8. Monthly performance reporting where applicable

Type A is a managed service, not merely production.

Type B: Creative Content / Production Support

Type B is for clients who already know what they want and need execution support.

It includes:

1. Video editing
2. Video creation
3. Graphic design
4. Carousel design
5. Static posts
6. Other clearly scoped creative production tasks

Type B does not include deep strategy, long-term content direction, or brand positioning unless upgraded or separately scoped.

8. Credit System Position

JomBoss uses credits as a service entitlement and scope-control mechanism.

Credits are:

1. Service-based
2. Used to manage scope
3. Used to give clients flexibility
4. Used to help internal workload planning

Credits are not:

1. Cash
2. Stored value
3. E-money
4. Refundable monetary balance
5. Transferable asset
6. Withdrawable value

Clients pay in MYR. Credits represent prepaid service entitlement only.

This must be reflected consistently in client-facing and internal documents.

9. Current Operating Logic

JomBoss operates through a managed workflow:

1. Client enquiry
2. Requirement clarification
3. Quotation or proposal
4. Deposit or payment confirmation
5. Internal task delegation
6. PM or internal owner assignment
7. Content or service production
8. Quality control
9. Client review
10. Revision
11. Final delivery
12. Final payment or retainer continuation
13. Performance review where applicable

The operating principle is:

If a task enters the JomBoss system, it must be delivered.

10. Current PM Model

JomBoss is developing a Project Manager model.

Core logic:

1. One project should have one accountable owner
2. Execution can be shared
3. Responsibility cannot be blurred
4. PMs manage coordination, progress, delegation, and timeline control
5. Talents must self-report progress
6. Silence is treated as project risk
7. Substitution requires proper handover
8. No last-minute drop-off without progress should be accepted

The PM model exists because JomBoss's root problem is not talent supply, but ownership, structure, and delivery discipline.

11. Current Product and Platform Direction

JomBoss is building toward a platform that may include:

1. Client enquiry flow
2. Talent portfolio system
3. Talent verification system
4. Project marketplace or project listing
5. PM workflow dashboard
6. Client project tracking
7. Quotation or credit system automation
8. Internal SOP support
9. Future AI-assisted workflow and career guidance tools

The current platform is not yet the full business. It is being built from lessons learned in the agency-first model.

12. Current Team

CEO

Ong Zher G

Responsibilities:

1. Strategy
2. Business model
3. Client and investor narrative
4. Legal and compliance thinking
5. Data room development
6. Fundraising and accelerator preparation
7. Overall direction

CTO / Product Lead

Aria

Responsibilities:

1. Platform development
2. Technical architecture
3. Product implementation
4. Web app progress
5. Tech documentation

COO / Operations

Size Ching

Responsibilities:

1. Internal operations
2. Service delivery support
3. Coordination
4. SOP execution
5. Internal project tracking

Other Team Members

To be confirmed in `CURRENT_TEAM_REGISTER.md`.

Any old role titles from past pitch decks should be treated as historical unless confirmed in the current team register.

13. Current Metrics

These metrics must be verified against financial and traction records before being used externally.

Current Claimed Metrics

1. Total revenue to date: approximately RM40,000
2. Average monthly revenue: approximately RM8,000
3. SMEs or clients served: approximately 20
4. Students paid: approximately 50
5. Talent or student community: approximately 300
6. Average students per project: 1 to 4
7. Average student payout per project: approximately RM300 per student

Verification Status

These metrics require supporting documents:

1. Revenue tracker
2. Client master list
3. Invoice records
4. Payment proof
5. Talent payout ledger
6. Student database or community proof

Until verified, Codex should label these as claimed metrics, not fully verified metrics.

14. Current Investor and Competition Context

JomBoss has participated in or engaged with:

1. Hult Prize
2. Startup World Cup Malaysia
3. Taylor's BizPod
4. Other startup and entrepreneurship programmes

The data room must track any obligations arising from competitions, grants, accelerators, or participation agreements.

Particular attention should be paid to agreements involving:

1. Equity
2. Warrants
3. Milestone-based funding
4. Reporting obligations
5. IP rights
6. Confidentiality
7. Founder or participant obligations

15. Current Legal and Compliance Assumptions

JomBoss must pay special attention to:

1. Founder agreement
2. Shareholding and cap table clarity
3. IP assignment from founders and contributors
4. Talent agreement
5. PM agreement
6. Client service agreement
7. Credit system compliance
8. Data protection and personal data handling
9. Employment or gig worker classification
10. Website privacy policy and terms of use

Until legal review is completed, Codex should mark these areas as requiring review.

16. Current Strategic Priorities

The current priorities are:

1. Build YC-level data room
 2. Create JomBoss Mastermind Codex repository
 3. Prepare current truth and checklist documents
 4. Organise corporate and legal records
 5. Verify revenue and client traction
 6. Create cap table and founder/team register
 7. Clean up IP ownership
 8. Standardise client and talent agreements
 9. Build platform documentation
 10. Set up weekly PA review system
-

17. Current Risks

High Priority Risks

1. Founder and team role inconsistency across old documents
 2. Missing or incomplete founder agreement
 3. Missing IP assignment from contributors
 4. Unverified revenue and client claims
 5. Talent classification and payout compliance
 6. Credit system legal treatment
 7. Client contracts not fully standardised
 8. Platform source code ownership and access
 9. Sensitive internal SOPs being shared too broadly
 10. Competition agreements creating future obligations
-

18. Open Questions

The following questions must be resolved:

1. Who are the current shareholders of JomBoss Joss Sdn. Bhd.?
2. What is the exact cap table?
3. Who are the current active founders or core team members?
4. Which old C-suite titles should be archived?
5. Does JomBoss have signed IP assignment from all contributors?
6. Does JomBoss own all platform source code?
7. Are all revenue claims supported by evidence?
8. What is the current cash position?

9. What legal agreements are already signed?
 10. What documents are safe to share with investors?
-

19. Update Rule

This document must be updated whenever a major company fact changes.

Whenever this file is updated, record the update in:

`00_SYSTEM/DECISION_LOG.md`

or

`00_SYSTEM/OPEN_ISSUES.md`

depending on whether the matter has been decided or remains unresolved.
