

JomBoss Decision Log

1. Purpose

This document records major decisions made by JomBoss.

The purpose is to prevent the company from relying on memory, informal chats, or outdated assumptions.

Codex must refer to this document when checking why a decision was made, when it was made, and whether it is still current.

2. When to Record a Decision

Record a decision when it affects:

1. Business model
 2. Pricing
 3. Credit system
 4. Founder or team roles
 5. Shareholding
 6. IP ownership
 7. Client contract terms
 8. Talent payout rules
 9. PM model
 10. Product roadmap
 11. Fundraising strategy
 12. Investor commitments
 13. Grant or accelerator obligations
 14. Legal or compliance assumptions
 15. Strategic direction
-

3. Decision Entry Template

Use this template for each decision:

```
## Decision: [Short title]
```

```
**Date:** YYYY-MM-DD
```

```
**Status:** Proposed / Approved / Rejected / Superseded
```

```
**Decision Owner:**

Decision Made

JomBoss will build a Codex-based internal knowledge repository called the JomBoss Mastermind.

The system will be used to organise the company data room, maintain source-of-truth documents, assist with weekly CEO review, and support future automation.

Reason

JomBoss has reached a stage where company information is spread across pitch decks, SOPs, contracts, financial records, client documents, and informal conversations.

This creates risk because:

1. Investors may ask for due diligence documents
2. Old information may conflict with current company truth
3. Founder and team roles may appear inconsistent
4. Revenue claims need supporting evidence
5. IP ownership needs to be organised
6. Legal and compliance gaps need tracking
7. The company needs a repeatable system before scaling

Alternatives Considered

1. Continue using Google Drive without structured AI support
2. Build only a normal investor data room
3. Use Notion as the main company knowledge base
4. Build a Codex repository with Markdown source-of-truth files

Expected Impact

This should improve:

1. Data room readiness
2. Investor credibility
3. Internal organisation
4. Weekly task tracking
5. Legal and compliance awareness
6. Founder decision-making
7. Platform and SOP development

Risks

1. If documents are not classified properly, sensitive information may be exposed
2. If outdated documents are not archived, Codex may produce conflicting outputs
3. If updates are not done weekly, the repository may become stale
4. If source-of-truth files are incomplete, Codex may give weak recommendations

Follow-Up Actions

Action	Owner	Deadline	Status
Create JomBoss Master Protocol	G	2026-06-18	Done
Create Data Room Master Checklist	G	2026-06-18	Done
Create Weekly PA Workflow	G	2026-06-18	Done
Create Current Truth Document	G	2026-06-18	Draft
Create Open Issues Register	G	2026-06-18	Draft
Create folder structure in Codex repo	G	Pending	Open
